Course Name: Mobile Computing

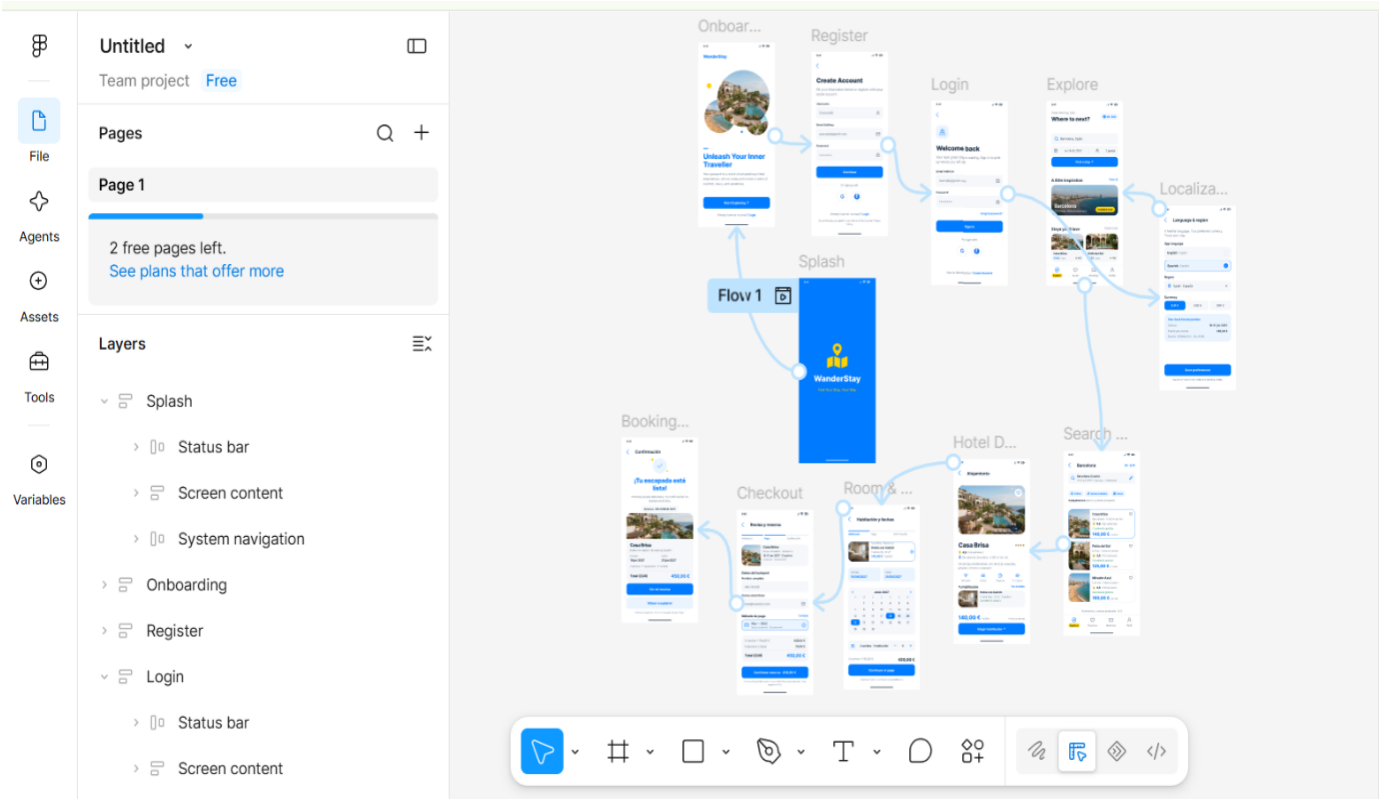

Experiment 5: Mobile Application Wireframe with Localization Features

Aim: To design a wireframe for a mobile application incorporating localization features using Figma.

Procedure:

1. Open Figma and create a new design file.
2. Create a mobile phone frame.
3. Design a home screen with a location name, map area, and navigation buttons.
4. Add features such as GPS location, language selection, and nearby places.
5. Include buttons for search, directions, and current location.
6. Arrange the elements clearly using simple shapes and text.
7. Connect the screens to demonstrate the application's navigation.

Output:

Result: A mobile application wireframe incorporating localization features was successfully designed using Figma.
