Experiment 15. Develop a Wireframe for a Mobile Application Addressing Challenges Related to Ad Hoc Wireless Networks Using Figma

Aim: To design a mobile application wireframe using Figma to manage ad hoc wireless network challenges such as connectivity, routing and network security

Procedure:

1. Open Figma and create a new design file.
2. Select a mobile phone frame.
3. Design a welcome screen.
4. Create a login screen.
5. Design a dashboard showing connected network devices.
6. Add options for device discovery and connection.
7. Include a network status screen.
8. Add routing and signal strength information.
9. Include security settings and data protection options.
10. Connect all screens using the Prototype option.
11. Save the design.

Output:

Result: Successfully designed a mobile application wireframe in Figma to manage ad hoc wireless network connectivity, routing and security challenges.
